THE HONOURABLE GEORGE H. DUNBAR
(Ottawa South)
REGISTRAR-GENERAL

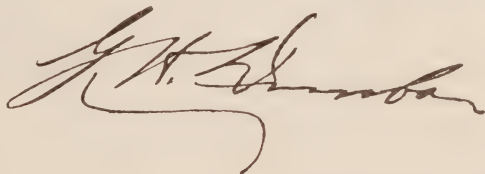

Foreword

I take pleasure in presenting the 86th Annual Vital Statistics Report compiled by the Office of the Registrar-General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1955. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1955.

In conclusion, may I state that while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths of the Province of Ontario.

A handwritten signature in dark ink, appearing to read "J. H. Chamberlain". The signature is fluid and cursive, with a long, sweeping underline that extends to the right.

Registrar-General.

SIR:

I have the honour to submit for your approval the Eighty-sixth Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1955.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,
Deputy Registrar-General.

TO THE HON. G. H. DUNBAR,
Registrar-General of Ontario.

1955	139,554	26.9	4,266	30.6	2,044	14.6

* Born to unmarried Mothers

There was a definite increase in live births in 1947 when the rate was 26 decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951-1955.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1955 for every 1,000 babies born alive, 15 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1955, 74 were to this group of mothers.

ONTARIO

FIVE-YEAR AVERAGES 1936-1950
AND FOR THE YEAR 1955

Stillbirths

In 1953, for the first time, certain detailed information regarding stillbirths registered in Ontario was published in this Report.

The data included in the following three tables comprises the total number of stillbirths (2,044) registered to resident mothers of this Province, 1955.

Of the 2,044 stillbirths registered during the year, 1,134 or 55.5 per cent occurred at or near term, while 899 or 44.0 per cent were recorded as less than 37 weeks' gestation (Table I(1)).

In Table I(2) there are shown the ten major categories of causes of stillbirth according to the age of the mother while in Table I(3) the same ten causes of stillbirth are set out by periods of gestation.

Chart 3

INFANT MORTALITY ONTARIO DEATHS AT EACH AGE PERIOD FIVE-YEAR AVERAGES 1936-1955 AND FOR THE YEAR 1955

Infant Mortality

Table J and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

Sixth Revision of the International Lists of Diseases and Causes of Death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1950 being 552, 584 in 1951, 529 in 1952, 569 in 1953, 571 in 1954, 560 in 1955, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1955 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

General Mortality

Table N presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

TABLE N DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000 POPULATION, ONTARIO, 1925-1955

Year	DEATHS			RATE PER 1,000 POPULATION

Table O presents both male and female crude death rates for each 5-year age-group, based on the population as enumerated at the censuses of 1951 and as estimated for the years 1948 to 1950 and 1952 to 1955. There are several features with respect to changing death rates which are worthy of comment, notable among which is the remarkable decrease in the death rate of children under 5 years of age from 11.0 in 1948 to 7.4 in 1955 for males and from 8.9 in 1948 to 5.9 in 1955 for females.

Chart 4 depicts the percentage of deaths occurring in each age-group of the population.

(1) Per cent of total deaths.

(2) Rate per 100,000 population.

(3) Includes Hodgkin's disease and the leukaemias.

*Per cent of total male deaths and rate per 100,000 male population.

TABLE Q THE FOUR CHIEF CAUSES OF DEATH IN THE DIFFERENT AGE GROUPS, ONTARIO, 1955

Int. List Number	Age Group and Cause of Death	DEATHS FROM SPECIFIED CAUSE			
		In Age Group		At All Ages	
		Number	Per Cent	Number	Per Cent
	under 1 year, total	3,622	78.2		
762, 765-773	Other diseases of early infancy.....	842	23.2	843	99.9
774-776	Immaturity.....	721	19.9	721	100.0
750-759	Congenital malformations.....	659	18.2	813	81.1
480-502, 763	Pneumonia, Bronchitis and Influenza.....	399	11.0	1,903	21.0
800-999	Accidental and violent deaths.....	210	5.8	3,592	5.8
	Other causes.....	791	21.8		
	1-4 years, total	563	77.8		
800-999	Accidental and violent deaths.....	211	37.5	3,592	5.9
480-502	Pneumonia, Bronchitis and Influenza.....	84	14.9	1,903	4.4
140-205	*Cancer (all forms).....	58	10.3	7,102	0.8
750-759	Congenital malformations.....	57	10.1	813	7.0
571, 572	Gastro-enteritis and colitis, except ulcerative, age 4 weeks and over.....	28	5.0	242	11.6
	Other causes.....	125	22.2		
	5-9 years, total	285	79.3		
800-999	Accidental and violent deaths.....	152	53.3	3,592	4.2
140-205	*Cancer (all forms).....	29	10.2	7,102	0.4
480-502	Pneumonia, Bronchitis and Influenza.....	19	6.7	1,903	1.0
750-759	Congenital malformations.....	18	6.3	813	2.2
590-594	Nephritis and Nephrosis.....	8	2.8	479	1.7
	Other causes.....	59	20.7		
	10-14 years, total	197	79.7		
800-999	Accidental and violent deaths.....	118	59.9	3,592	3.3
140-205	*Cancer (all forms).....	18	9.1	7,102	0.3
480-502	Pneumonia, Bronchitis and Influenza.....	8	4.1	1,903	0.4
750-759	Congenital malformations.....	7	3.6	813	0.9
401, 410-443	Diseases of the heart.....	6	3.0	17,088	0.04
	Other causes.....	40	20.3		
	15-19 years, total	283	79.2		
800-999	Accidental and violent deaths.....	1,741	61.5	3,592	4.8
140-205	*Cancer (all forms).....	24	8.5	7,102	0.3
750-759	Congenital malformations.....	9	3.2	813	1.1
480-502	Pneumonia, Bronchitis and Influenza.....	9	3.2	1,903	0.5
401, 410-443	Diseases of the heart.....	8	2.8	17,088	0.05
	Other causes.....	59	20.8		
	20-24 years, total	408	84.6		
800-999	Accidental and violent deaths.....	265	65.0	3,592	7.4
140-205	*Cancer (all forms).....	34	8.3	7,102	0.5
401, 410-443	Diseases of the heart.....	17	4.2	17,088	0.1
590-594	Nephritis and Nephrosis.....	16	3.9	479	3.3
640-689	Deliveries and complications of Pregnancy, Childbirth, and the Puerperium.....	13	3.2	81	16.0
	Other causes.....	63	15.4		

TABLE Q THE FOUR CHIEF CAUSES OF DEATH IN THE DIFFERENT
AGE GROUPS, ONTARIO, 1955—Continued

Int. List Number	Age group and Cause of Death	DEATHS FROM SPECIFIED CAUSE			
		In Age Group		At All Ages	
		Number	Per Cent	Number	Per Cent

NOTE.—Previous to 1950 deaths from late effects of acute poliomyelitis, acute infectious encephalitis, measles, mumps, scarlet fever, typhoid fever, diphtheria and whooping cough were not tabulated separately.

(1) Rate per 100,000 female population.

Chart 5

DEATHS FROM TUBERCULOSIS, CANCER AND PNEUMONIA

ONTARIO, 1947-55

Rates per 100,000 population

* The 1950 to 1955 figures comprise the malignant neoplasm group (categories 140-205 under the 6th Revision of the International List of causes of death).

Mortality from Tuberculosis

Table S (1) shows the deaths from all forms of tuberculosis in the province from 1946 to 1955. Table S (2) shows the death rates per 100,000 population classified by the age of the decedents from 1946 to 1955. During the year 1955 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 4.7 per 100,000 of population. Chart 5 illustrates the decided reduction in mortality from tuberculosis which has taken place since the beginning of the century.

Table S (3) in Part 1 of this report gives details of deaths and death rates for counties according to place of occurrence and place of residence for the year 1955.

Mortality from Cancer

Chart 5 illustrates the steady upward trend in the mortality rate from cancer. The increase in the total number of deaths since 1946 is shown in Table T (1) and is apparent in most of the age groups particularly among older persons. Table T (2) shows the rate from 1946 to 1955 by sex.

TABLE T (1) DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1946-1955

NOTE: Total deaths for cancer for the years 1946-1955 include Hodgkin's disease and the leukaemias.

Autopsy Statistics

Detailed information regarding the frequency of autopsy among deaths in Ontario during 1955 is being published in this Report for the first time. The difference between the number of deaths in these special tables (45,417) and the total in other death tables is due to the fact that information was not available at the time of tabulation for seventeen residents of the Province who died outside Ontario.

Table V(1) presents, for all deaths and for those that occurred in hospital, and for each of seventeen broad cause-groups, the number of deaths in which the certifying physician reported that an autopsy had been done.

TABLE V (1) AUTOPSIES BY CAUSE OF DEATH, RESIDENT DEATHS IN ONTARIO, 1955

Int. List No.	CAUSE OF DEATH	Total Deaths			Deaths in Hospital		
		Number	Autopsy Done		Number	Autopsy Done	
			Number	Per Cent		Number	Per Cent
001-138	Infective and parasitic diseases.....	495	178	36.0	407	168	41.3
140-239	Neoplasms.....	7,226	1,442	20.0	4,793	1,402	29.2
240-289	Allergic, endocrine, metabolic and nutritional diseases.....	889	149	16.8	565	133	23.5
290-299	Diseases of blood and blood-forming organs.....	134	37	27.6	82	34	41.5
300-326	Mental, psychoneurotic, and person- ality disorders.....	111	29	26.1	67	20	29.9
330-398	Diseases of nervous system and sense organs.....	6,461	560	8.7	3,499	517	14.8
400-468	Diseases of circulatory system.....	18,430	1,764	9.6	7,915	1,556	19.7
470-527	Diseases of respiratory system.....	2,336	582	26.0	1,484	498	33.6
530-587	Diseases of digestive system.....	1,526	616	40.4	1,294	594	45.9
590-637	Diseases of genito-urinary system...	914	230	25.2	689	222	32.2
640-689	Deliveries and complications of preg- nancy, childbirth and puerperium...	80	54	67.5	68	45	66.2
690-716	Diseases of skin and cellular tissue...	56	18	32.1	45	18	40.0
720-749	Diseases of bones and organs of move- ment.....	115	21	18.3	58	21	36.2
750-759	Congenital malformations.....	813	338	41.6	678	328	48.4
760-776	Certain diseases of early infancy.....	2,072	553	26.7	1,990	544	27.3
780-795	Symptoms, senility and ill-defined conditions.....	273	11	4.0	53	8	15.1
E800-999	Accidents, poisonings and violence...	3,586	1,233	34.4	1,475	666	45.2
	Total.....	45,417	7,815	17.2	25,162	6,774	26.9

Of the 45,417 recorded deaths, an autopsy was reported to have been done in 7,815 or 17.2 per cent. The autopsy rate was highest for deliveries and complications of pregnancy, childbirth and the puerperium (67.5 per cent), followed by congenital malformations (41.6 per cent), and diseases of the digestive system (40.4 per cent). Deaths in hospital totalled 25,162 or 55.4 per cent of all deaths; of these 25,162 deaths, an autopsy was reported in 6,774 or 26.9 per cent.

A similar tabulation for malignant neoplasms of various sites is set out in Table V(2). An autopsy was reported to have been done in 19.6 per cent of all deaths assigned to malignant neoplasms (including Hodgkin's disease and the leukaemias). The proportions ranged from 10.3 per cent for malignant neoplasms of the breast to 29.8 per cent for malignant neoplasms of the trachea, bronchus and lung not specified as secondary. This table also presents separate data for deaths that occurred in hospital.

TABLE V (2) AUTOPSIES BY SITE OF CANCER
RESIDENT DEATHS ATTRIBUTED TO NEOPLASMS, ONTARIO, 1955

Int. List No.	SITE OF NEOPLASM	Total Deaths			Deaths in Hospital

Marriages

From Table X it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1955.

TABLE X MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION, ONTARIO, 1933-1955

Year	Number	Rate per 1,000 Population	Year	Number	Rate per 1,000 Population

			1955.....	44,634	8.6

Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past four censuses.

	1921*	1931	1941	1951
Divorced persons—Male.....	1,135	1,071	2,291	4,766
Female.....	1,369	1,015	2,865	7,668
Per cent of population—Male.....	0.08	0.06	0.12	0.21
Female.....	0.09	0.06	0.15	0.34

*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table Y. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

TABLE Y DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1955, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1955

REGISTRAR-GENERAL

Foreword

I take pleasure in presenting the 87th Annual Vital Statistics Report compiled by the Office of the Registrar-General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1956. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1956.

In conclusion, may I state that while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths of the Province of Ontario.

A handwritten signature in dark ink, appearing to read 'J. H. Shuman', with a long, sweeping underline that extends to the right.

Registrar-General.

SIR:

I have the honour to submit for your approval the Eighty-seventh Annual Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1956.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,
Deputy Registrar-General.

TO THE HON. G. H. DUNBAR,
Registrar-General of Ontario.

PART I. COMPARATIVE AND ANALYTICAL SUMMARY

Population

For reference purposes the estimated population of the province over a period of three decades is shown by sex and age in Table A, while a distribution by sex and age-groups of the census population of 1956 is provided in Table B.

TABLE A POPULATION, CENSUSES 1921, 1931, 1941, 1951 AND 1956 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX AND AGE GROUP, ONTARIO

(In Thousands)

* Born to unmarried mothers

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951-1956.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1956 for every 1,000 babies born alive, 14 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1956, 76 were to this group of mothers.

NOTE:—1925 figures for married mothers only.

Stillbirths to mothers of "not stated" ages have been distributed on the basis of specified ages.

† Rates not computed for less than 10 stillbirths.

Chart 2

PERCENTAGE OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS IN EACH AGE GROUP OF MOTHERS

ONTARIO
FIVE-YEAR AVERAGES 1936-1955
AND FOR THE YEAR 1956

Stillbirths

In 1953, for the first time, certain detailed information regarding stillbirths registered in Ontario was published in this Report.

The data included in the following three tables comprises the total number of stillbirths (1,969) registered to resident mothers of this Province, 1956.

Of the 1,969 stillbirths registered during the year, 1,117 or 56.7 per cent occurred at or near term, while 843 or 42.8 per cent were recorded as less than 37 weeks' gestation (Table I(1)).

In Table I(2) there are shown the ten major categories of causes of stillbirth according to the age of the mother while in Table I(3) the same ten causes of stillbirth are set out by periods of gestation.

Chart 3

INFANT MORTALITY
ONTARIO
DEATH RATES PER 100,000 LIVE BIRTHS
AT EACH AGE PERIOD
 FIVE YEAR AVERAGES 1941-1955
 AND FOR THE YEAR 1956

2800—

Infant Mortality

Table J and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

Sixth Revision of the International Lists of Diseases and Causes of Death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1956 being 607, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1956 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

General Mortality

Table N presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

Whooping cough.....	74	18	17	41	31	13	12	14	19	8
Whooping cough—late effects...	1

NOTE —Previous to 1950 deaths from late effects of acute poliomyelitis, acute infectious encephalitis, measles, mumps, scarlet fever, typhoid fever, diphtheria and whooping cough were not tabulated separately.

Chart 5

DEATHS FROM
TUBERCULOSIS, CANCER AND PNEUMONIA

ONTARIO, 1947-56

Rates per 100,000 population

* The 1950 to 1956 figures comprise the malignant neoplasm group (categories 140-205 under the 6th Revision of the International List of causes of death).

Mortality from Tuberculosis

Table S (1) shows the deaths from all forms of tuberculosis in the province from 1947 to 1956. Table S (2) shows the death rates per 100,000 population classified by the age of the decedents from 1947 to 1956. During the year 1956 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 4.1 per 100,000 of population. Chart 5 illustrates the decided reduction in mortality from tuberculosis which has taken place since the beginning of the century.

Table S (3) in Part 1 of this report gives details of deaths and death rates for counties, cities, towns and villages of 5,000 population and over according to place of occurrence and place of residence for the year 1956.

Mortality from Cancer

Chart 5 illustrates the trend in the mortality rate from cancer. The increase in the total number of deaths since 1947 is shown in Table T (1) and is apparent in most of the age groups particularly among older persons. Table T (2) shows the rate from 1947 to 1956 by sex.

TABLE T (1) DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1947-1956

Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1956.

TABLE W MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION,
ONTARIO, 1933-1956

YEAR	Number	Rate per 1,000 Population	YEAR	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1945.....	34,137	8.5
1934.....	25,874	7.3	1946.....	46,073	11.2

1944.....	31,227	7.9	1956.....	46,282	8.6

Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past five censuses.

	1921*	1931	1941	1951	1956
Divorced persons—Male.....	1,135	1,071	2,291	4,766	5,529
Female.....	1,369	1,015	2,865	7,668	9,069
Per cent of population—Male.....	0.08	0.06	0.12	0.21	0.20
Female.....	0.09	0.06	0.15	0.34	0.34

*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

TABLE X DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1955, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1956

THE HONOURABLE MACKINNON PHILLIPS, M.D., C.M., LL.D.
REGISTRAR-GENERAL

Foreword

I take pleasure in presenting the 88th Annual Vital Statistics Report compiled by the Office of the Registrar-General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1957. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1957.

In conclusion, may I state that while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths of the Province of Ontario.

M.D., C.M., LL.D.

Registrar-General.

SIR :

I have the honour to submit for your approval the Eighty-eighth Annual Vital Statistics Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1957.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,
Deputy Registrar-General.

TO THE HON. MACKINNON PHILLIPS, M.D., C.M., LL.D.
Registrar-General of Ontario.

PART I. COMPARATIVE AND ANALYTICAL SUMMARY

Population

For reference purposes the estimated population of the province over a period of three decades is shown by sex and age in Table A, while a distribution by sex and age-groups of the estimated population of 1957 is provided in Table B.

TABLE A POPULATION, CENSUSES 1921, 1931, 1941, 1951 AND 1956 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX AND AGE GROUP, ONTARIO

(In Thousands)

YEAR	Under 20		20-64		65 and over		TOTAL		
	M	F	M	F	M	F	M	F	T
1921	576.3	564.1	819.5	801.5	86.1	86.2	1,481.9	1,451.8	2,933.7

* Born to unmarried mothers

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951-1957.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1957 for every 1,000 babies born alive, 13 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1957, 77 were to this group of mothers.

NOTE:—1925 figures for married mothers only.

† Rates not computed for less than 10 stillbirths.

Stillbirths to mothers of "not stated" ages have been distributed on the basis of specified ages.

Chart 2

PERCENTAGE OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS IN EACH AGE GROUP OF MOTHERS

ONTARIO
FIVE-YEAR AVERAGES 1936-1955
AND FOR THE YEAR 1957

Stillbirths

In 1953, for the first time, certain detailed information regarding stillbirths registered in Ontario was published in this Report.

The data included in the following three tables comprises the total number of stillbirths (1,999) registered to resident mothers of this Province, 1957.

Of the 1,999 stillbirths registered during the year, 1,178 or 58.9 per cent occurred at or near term, while 812 or 40.6 per cent were recorded as less than 37 weeks' gestation (Table I(1)).

In Table I(2) there are shown the ten major categories of causes of stillbirth according to the age of the mother while in Table I(3) the same ten causes of stillbirth are set out by periods of gestation.

Chart 3

INFANT MORTALITY
 ONTARIO
 DEATH RATES PER 100,000 LIVE BIRTHS
 AT EACH AGE PERIOD
 FIVE YEAR AVERAGES 1941-1955
 AND FOR THE YEAR 1957

Infant Mortality

Table J and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

Sixth Revision of the International Lists of Diseases and Causes of Death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1957 being 608, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1957 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

Cities—Units of 10,000 population and over.

Towns—Units of 5,000 to 10,000.

General Mortality

Table N presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

TABLE N DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000
POPULATION, ONTARIO, 1925-1957

YEAR	Deaths			Rate per 1,000 Population		
	Total	Male	Female	Total	Male	Female

Whooping cough—late effects...	1

NOTE—Previous to 1950 deaths from late effects of acute poliomyelitis, acute infectious encephalitis, measles, mumps, scarlet fever, typhoid fever, diphtheria and whooping cough were not tabulated separately.

Chart 5

DEATHS FROM
TUBERCULOSIS, CANCER AND PNEUMONIA
ONTARIO, 1947 - 57

RATES PER 100,000 POPULATION

* The 1950 to 1957 figures comprise the malignant neoplasm group (categories 140-205 under the 6th Revision of the International List of causes of death).

Mortality from Tuberculosis

Table S (1) shows the deaths from all forms of tuberculosis in the province from 1948 to 1957. Table S (2) shows the death rates per 100,000 population classified by the age of the decedents from 1948 to 1957. During the year 1957 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 3.9 per 100,000 of population. Chart 5 illustrates the reduction in mortality from tuberculosis which has taken place since 1947.

Table S (3) in Part 1 of this report gives details of deaths and death rates for counties, cities, towns and villages of 5,000 population and over according to place of occurrence and place of residence for the year 1957.

(1) Excluding Patricia Portion

Mortality from Cancer

Chart 5 illustrates the trend in the mortality rate from cancer. The increase in the total number of deaths since 1948 is shown in Table T (1) and is apparent in most of the age groups particularly among older persons. Table T (2) shows the rate from 1948 to 1957 by sex.

TABLE T (1) DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1948-1957

960-965	Late effects of injury and poisoning..... M 19
970-979	Suicide and self-inflicted injury..... M 388
980-985	Homicide and injury purposely inflicted by other persons (not in war)..... M 46
990-999	Injury resulting from operations of war..... M 25

Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1957.

TABLE W MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION, ONTARIO, 1933-1957

YEAR	Number	Rate per 1,000 Population	YEAR	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1945.....	34,137	8.5
1934.....	25,874	7.3	1946.....	46,073	11.2
1935.....	26,843	7.5	1947.....	44,056	10.5
1936.....	27,734	7.7	1948.....	43,242	10.1
1937.....	29,893	8.2	1949.....	43,304	9.9
1938.....	30,080	8.1	1950.....	43,774	9.7
1939.....	34,657	9.3	1951.....	45,198	9.8
1940.....	41,229	11.0	1952.....	45,251	9.5
1941.....	43,270	11.4	1953.....	45,954	9.3
1942.....	45,466	11.7	1954.....	45,028	8.8
1943.....	36,109	9.2	1955.....	44,634	8.5
1944.....	31,227	7.9	1956.....	46,282	8.6
			1957.....	46,780	8.3

Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past five censuses.

	1921*	1931	1941	1951	1956
Divorced persons—Male.....	1,135	1,071	2,291	4,766	5,529
Female.....	1,369	1,015	2,865	7,668	9,069
Per cent of population—Male.....	0.08	0.06	0.12	0.21	0.20
Female.....	0.09	0.06	0.15	0.34	0.34

*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts there has been a steady annual increase.

TABLE X DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1957, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1957

Year	Dissolu- tions of Marriage	Rate per 100,000 Popula- tion	Year	Dissolu- tions of Marriage	Rate per 100,000 Popula- tion	DISSOLUTIONS GRANTED TO—		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females
						Hus- bands	Wives	
1919	46	1.6	1935	491	13.7	180	311	579
1920	89	3.1	1936	519	14.3	174	340	512

THE HONOURABLE MACKINNON PHILLIPS, M.D. C.M., LL.D.

REGISTRAR-GENERAL

Foreword

I take pleasure in presenting the 89th Annual Vital Statistics Report compiled by the Office of the Registrar-General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1958. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1958.

In conclusion, may I state that while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths of the Province of Ontario.

A handwritten signature in dark ink, appearing to read "M.D. C.M., LL.D.", with a large, flowing initial "M" and "D".

M.D. C.M., LL.D.

Registrar-General.

SIR :

I have the honour to submit for your approval the Eighty-ninth Annual Vital Statistics Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1958.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,
Deputy Registrar-General.

TO THE HON. MACKINNON PHILLIPS, M.D. C.M., LL.D.
Registrar-General of Ontario.

PART I. COMPARATIVE AND ANALYTICAL SUMMARY

Population

For reference purposes the estimated population of the province over a period of three decades is shown by sex and age in Table A, while a distribution by sex and age-groups of the estimated population of 1958 is provided in Table B.

TABLE A POPULATION, CENSUSES 1921, 1931, 1941, 1951 AND 1956 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX AND AGE GROUP, ONTARIO
(In Thousands)

YEAR	Under 20		20-64		65 and over		TOTAL		
	M	F	M	F	M	F	M	F	T
1921	576.3	564.1	819.5	801.5	86.1	86.2	1,481.9	1,451.8	2,933.7

* Born to unmarried mothers

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951-1958.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1958 for every 1,000 babies born alive, 13 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1958, 78 were to this group of mothers.

Chart 2

PERCENTAGE OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS IN EACH AGE GROUP OF MOTHERS

ONTARIO
FIVE-YEAR AVERAGES 1936-1955
AND FOR THE YEAR 1958

Stillbirths

In 1953, for the first time, certain detailed information regarding stillbirths registered in Ontario was published in this Report.

The data included in the following three tables comprises the total number of stillbirths (2,017) registered to resident mothers of this Province, 1958.

Of the 2,017 stillbirths registered during the year, 1,171 or 58.1 per cent occurred at or near term, while 836 or 41.4 per cent were recorded as less than 37 weeks' gestation (Table I(1)).

In Table I(2) there are shown the ten major categories of causes of stillbirth according to the age of the mother while in Table I(3) the same ten causes of stillbirth are set out by periods of gestation.

INFANT MORTALITY

ONTARIO

DEATH RATES PER 100,000 LIVE BIRTHS

AT EACH AGE PERIOD

FIVE YEAR AVERAGES 1941-1955

AND FOR THE YEAR 1958

2800—

Infant Mortality

Table J and Chart 3 both show very clearly that although infant and neonatal mortality rates have declined during the past ten years the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

Sixth Revision of the International Lists of Diseases and Causes of Death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1958 being 640, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1958 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

Towns—Units of 5,000 to 10,000.

General Mortality

Table N presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

TABLE N DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000

Vincent's angina.....	1	1	1
Whooping cough.....	17	41	31	13	12	14	19	8	10	4
Whooping cough—late effects...	1

NOTE—Previous to 1950 deaths from late effects of acute poliomyelitis, acute infectious encephalitis, measles, mumps, scarlet fever, typhoid fever, diphtheria and whooping cough were not tabulated separately.

Chart 5

DEATHS FROM TUBERCULOSIS, CANCER AND PNEUMONIA

ONTARIO, 1948 - 58

RATES PER 100,000 POPULATION

* The 1950 to 1958 figures comprise the malignant neoplasm group (categories 140-205 under the 6th Revision of the International List of causes of death).

Mortality from Tuberculosis

Table S (1) shows the deaths from all forms of tuberculosis in the province from 1949 to 1958. Table S (2) shows the death rates per 100,000 population classified by the age of the decedents from 1949 to 1958. During the year 1958 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 3.2 per 100,000 of population. Chart 5 illustrates the reduction in mortality from tuberculosis which has taken place since 1948.

Table S (3) in Part 1 of this report gives details of deaths and death rates for counties, cities, towns and villages of 5,000 population and over according to place of occurrence and place of residence for the year 1958.

(1) Excluding Patricia Portion

Mortality from Cancer

Chart 5 illustrates the trend in the mortality rate from cancer. The increase in the total number of deaths since 1949 is shown in Table T (1) and is apparent in most of the age groups particularly among older persons. Table T (2) shows the rate from 1949 to 1958 by sex.

Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1958.

TABLE W MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION, ONTARIO, 1933-1958

YEAR	Number	Rate per 1,000 Population	YEAR	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1946.....	46,073	11.2
1934.....	25,874	7.3	1947.....	44,056	10.5
1935.....	26,843	7.5	1948.....	43,242	10.1
1936.....	27,734	7.7	1949.....	43,304	9.9
1937.....	29,893	8.2	1950.....	43,774	9.7
1938.....	30,080	8.1	1951.....	45,198	9.8
1939.....	34,657	9.3	1952.....	45,251	9.5

1945.....	34,137	8.5	1958.....	46,894	8.1

Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past five censuses.

	1921*	1931	1941	1951	1956
Divorced persons—Male.....	1,135	1,071	2,291	4,766	5,529
Female.....	1,369	1,015	2,865	7,668	9,069
Per cent of population—Male.....	0.08	0.06	0.12	0.21	0.20
Female.....	0.09	0.06	0.15	0.34	0.34

*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts. The rate has been increased.

TABLE X DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1958, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1958

Year	Dissolu- tions of Marriage	Rate per 100,000 Popula- tion	Year	Dissolu- tions of Marriage	Rate per 100,000 Popula- tion	DISSOLUTIONS GRANTED TO—		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females

THE HONOURABLE JOHN YAREMKO, B.A., Q.C.

REGISTRAR-GENERAL

Foreword

I take pleasure in presenting the 90th Annual Vital Statistics Report compiled by the Office of the Registrar-General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1959. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1959.

In conclusion, may I state that, while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths in the Province of Ontario.

A handwritten signature in dark ink, appearing to read "J. M. Garneau". The signature is fluid and cursive, with a large, sweeping initial "J" and a long, horizontal tail stroke.

B.A., Q.C.,

Registrar-General.

SIR :

I have the honour to submit for your approval the Ninetieth Annual Vital Statistics Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1959.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,
Deputy Registrar-General.

TO THE HON. JOHN YAREMKO, B.A., Q.C.
Registrar-General of Ontario.

PART I. COMPARATIVE AND ANALYTICAL SUMMARY

Population

For reference purposes the estimated population of the province over a period of three decades is shown by sex and age in Table A, while a distribution by sex and age-groups of the estimated population of 1959 is provided in Table B.

TABLE A POPULATION, CENSUSES 1921, 1931, 1941, 1951 AND 1956 AND ESTIMATED FOR INTERCENSAL YEARS, BY SEX AND AGE GROUP, ONTARIO

(In Thousands)

YEAR	Under 20		20-64		65 and over		TOTAL

* Born to unmarried mothers

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951-1959.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1959 for every 1,000 babies born alive, 12 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1959, 78 were to this group of mothers.

NOTE:—† Rates not computed for less than 10 stillbirths.

Stillbirths to mothers of "not stated" ages have been distributed on the basis of specified ages.

Chart 2

PERCENTAGE OF LIVE BIRTHS, STILLBIRTHS AND ILLEGITIMATE BIRTHS IN EACH AGE GROUP OF MOTHERS

ONTARIO
FIVE-YEAR AVERAGES 1936-1955
AND FOR THE YEAR 1959

Stillbirths

In 1953, for the first time, certain detailed information regarding stillbirths registered in Ontario was published in this Report.

The data included in the following three tables comprises the total number of stillbirths (2,016) registered to resident mothers of this Province, 1959.

Of the 2,016 stillbirths registered during the year, 1,160 or 57.6 per cent occurred at or near term, while 853 or 42.5 per cent were recorded as less than 37 weeks' gestation (Table I(1)).

In Table I(2) there are shown the ten major categories of causes of stillbirth according to the age of the mother while in Table I(3) the same ten causes of stillbirth are set out by periods of gestation.

Chart 3

INFANT MORTALITY
ONTARIO
DEATH RATES PER 100,000 LIVE BIRTHS
AT EACH AGE PERIOD
FIVE YEAR AVERAGES 1941-1955
AND FOR THE YEAR 1959

Infant Mortality

Table J and Chart 3 both show very clearly that, although infant and neonatal mortality rates have declined during the past ten years, the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

Sixth Revision of the International Lists of Diseases and Causes of Death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1959 being 617, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1959 and those for the preceding ten-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were sub-divided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

Cities—Units of 10,000 population and over.

Towns—Units of 5,000 to 10,000.

General Mortality

Table N presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

TABLE N DEATHS (EXCLUSIVE OF STILLBIRTHS) AND DEATH RATES PER 1,000 POPULATION, ONTARIO, 1925-1959

YEAR	Deaths			Rate per 1,000 Population		
	Total	Male	Female	Total	Male	Female
1925.....	33,960	17,583	16,377	10.9	11.5	10.5
1926.....	35,909	18,721	17,188	11.3	11.9	10.8

	Other causes.....	640	16.3		
	55-64 years	7,207	85.6		
401, 410-443	Diseases of the heart.....	3,104	43.1	19,163	16.2
140-205	*Cancer (all forms).....	1,774	24.6	7,959	22.3
330-334	Vascular lesions affecting central nervous system	683	9.5	6,571	10.4
800-999	Accidental and violent deaths.....	378	5.2	3,790	10.0
480-502	Pneumonia, bronchitis and influenza.....	230	3.2	2,649	8.7
	Other causes.....	1,038	14.4		
	65-74 years	11,914	85.6		
401, 410-443	Diseases of the heart.....	5,485	46.0	19,163	28.6
140-205	*Cancer (all forms).....	2,288	19.2	7,959	28.7
330-334	Vascular lesions affecting central nervous system	1,649	13.8	6,571	25.1
480-502	Pneumonia, bronchitis and influenza.....	460	3.9	2,649	17.4
800-999	Accidental and violent deaths.....	317	2.7	3,790	8.4
	Other causes.....	1,715	14.4		
	75 years and over	19,039	86.3		
401, 410-443	Diseases of the heart.....	8,435	44.3	19,163	44.0
330-334	Vascular lesions affecting central nervous system	3,826	20.1	6,571	58.2
140-205	*Cancer (all forms).....	2,195	11.5	7,959	27.6
480-502	Pneumonia, bronchitis and influenza.....	1,211	6.4	2,649	45.7
450-456	Diseases of arteries.....	760	4.0	1,057	71.9
	Other causes.....	2,612	13.7		

*Includes Hodgkin's disease and the leukaemias.

Chart 5

DEATHS FROM
TUBERCULOSIS, CANCER AND PNEUMONIA
ONTARIO , 1948 - 59
RATES PER 100,000 POPULATION

* The 1950 to 1959 figures comprise the malignant neoplasm group (categories 140-205 under the 6th Revision of the International List of causes of death).

Mortality from Tuberculosis

Table S (1) shows the deaths from all forms of tuberculosis in the province from 1950 to 1959. Table S (2) shows the death rates per 100,000 population classified by the age of the decedents from 1950 to 1959. During the year 1959 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 2.8 per 100,000 of population. Chart 5 illustrates the reduction in mortality from tuberculosis which has taken place since 1948.

Table S (3) in Part 1 of this report gives details of deaths and death rates for counties, cities, towns and villages of 5,000 population and over according to place of occurrence and place of residence for the year 1959.

Mortality from Cancer

Chart 5 illustrates the trend in the mortality rate from cancer. The increase in the total number of deaths since 1950 is shown in Table T (1) and is apparent in most of the age groups particularly among older persons. Table T (2) shows the rate from 1950 to 1959 by sex.

TABLE T (1) DEATHS FROM CANCER, BY AGE AND SEX, ONTARIO, 1950-1959

Table V Classification of Accidental and Violent Deaths According to the Nature of the Injury, Ontario, 1959

[illegible]

Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1959.

**TABLE W MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION,
ONTARIO, 1933-1959**

YEAR	Number	Rate per 1,000 Population	YEAR	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1946.....	46,073	11.2
1934.....	25,874	7.3	1947.....	44,056	10.5

			1959.....	46,598	7.8

Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past five censuses.

	1921*	1931	1941	1951	1956
Divorced persons—Male.....	1,135	1,071	2,291	4,766	5,529
Female.....	1,369	1,015	2,865	7,668	9,069
Per cent of population—Male.....	0.08	0.06	0.12	0.21	0.20
Female.....	0.09	0.06	0.15	0.34	0.34

*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but, since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts, the rate has been increased.

TABLE X DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1959, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1959

REGISTRAR GENERAL

THE HONOURABLE JOHN YAREMKO, B.A., Q.C.

REGISTRAR GENERAL

Foreword

I take pleasure in presenting the 91st Annual Vital Statistics Report compiled by the Office of the Registrar General. This report is prepared in two parts.

Part I consists of an analytical survey of the vital statistics of the Province, and, in so far as can be portrayed by vital statistics, indicates the trend over the past years in the general state of health of the people of Ontario. In the light of such general trends, it is possible to assess the vital statistics for the year 1960. It also emphasizes certain specific problems in the field of public health such as infant and maternal mortality and deaths from such diseases as heart and cancer.

Part II comprises detailed tables covering the various aspects of vital statistics for the Province of Ontario in 1960.

In conclusion, may I state that, while this report is primarily of interest to certain professions and agencies, it will give any interested parties a real insight into the vital statistics concerning births, marriages and deaths in the Province of Ontario.

J. M. Garbutt.

B.A., Q.C.,

Registrar General.

SIR :

I have the honour to submit for your approval the Ninety-first Annual Vital Statistics Report made in conformity with and under the provisions of the Act respecting the Registration of Births, Marriages and Deaths in the Province of Ontario, for the year ending December 31st, 1960.

I have the honour to be, Sir,

Your obedient servant,

R. B. WALLACE,
Deputy Registrar-General.

TO THE HON. JOHN YAREMKO, B.A., Q.C.
Registrar General of Ontario.

* Born to unmarried mothers

There was a definite increase in live births in 1947 when the rate was 26, decreasing slightly for the years 1948 to 1950 and showing a decided increase for the years 1951-1960.

The stillbirth rate, on the other hand, has been on an extremely encouraging downward trend. In 1960 for every 1,000 babies born alive, 12 were stillborn.

With respect to illegitimacy, Table G and Chart 2 indicate that the great majority of the illegitimate live births occur to mothers under 25 years of age. Of every 100 such births in 1960, 80 were to this group of mothers.

Method of Certification of Cause of Death Ontario, 1960

Information on the recorded method of certification of deaths in Ontario, whether by a coroner or medical practitioner, and the frequency of autopsies for a selected group of cause-of-death categories, prepared in collaboration with the Medical Statistics Branch, Ontario Department of Health, is presented in this report for the first time.

These data were tabulated by the Office of the Registrar General and are designated as tentative by reason of the fact that they are based on the death certificates received directly by the Office of the Registrar General and do not include deaths of residents of Ontario which occurred outside the Province.

Of the 51,459 recorded deaths during 1960, 12,378 or 24.0 per cent were recorded as having been certified by a coroner; in 26.0 per cent of these cases an autopsy was performed. There were 39,070 deaths recorded as having been certified by a medical practitioner; in 7,444 or 19.0 per cent of these an autopsy was reported to have been performed. In only 11 cases was the certifier other than a coroner or medical practitioner or unknown.

Of the deaths recorded as certified by coroners (12,378), 1,000 or 8.1 per cent were assigned to vascular lesions of the central nervous system (I.C.D. 330-334), 5,136 or 41.5 per cent were attributed to arteriosclerotic and degenerative heart disease (I.C.D. 420-422), and 2,998 or 24.2 per cent were due to accident, suicide or homicide (I.C.D. E800-999).

There is great variation between cause-of-death categories in the proportions confirmed by post-mortem—from 10.1 per cent for arteriosclerotic and degenerative heart disease (I.C.D. 420-422) and 10.5 per cent for vascular lesions of the central nervous system (I.C.D. 330-334), to 81.9 per cent for homicide and operations of war, 61.8 per cent for complications of pregnancy, childbirth and the puerperium (I.C.D. 640-689) and 56.0 per cent for motor vehicle accidents (I.C.D. E810-835). The proportion of all deaths from all causes in which a post-mortem examination was made was 20.7 per cent.

Chart 3

INFANT MORTALITY
ONTARIO
DEATH RATES PER 100,000 LIVE BIRTHS
AT EACH AGE PERIOD
 FIVE YEAR AVERAGES 1941-1955
 AND FOR THE YEAR 1959

2800 -

Infant Mortality

Table J and Chart 3 both show very clearly that, although infant and neonatal mortality rates have declined during the past ten years, the actual number of children who died before they reached one year of age has increased. These increases must be considered in comparison with the extensive increase in the number of births during the same period.

Sixth Revision of the International List of Diseases and Causes of Death

The introduction of the new International Statistical Classification in 1950 was accompanied by a change in the procedure of selecting a cause of death for tabulation where multiple causes were stated. Under the new selection procedure, the cause for tabulation is based on the preference expressed by the physician on the medical certificate as indicated by the order in which he records the causes. This method has replaced the former procedure of arbitrary selection by rules.

The effect of the statistical assignments being guided by the physicians' preference is to make recorded mortality more closely reflect clinical opinion, and the recorded mortality is lowered for certain causes and increased for others. The most dramatic illustration of this is given by diabetes, the deaths for 1960 being 677, as compared with 1,157 in 1949.

Noteworthy differences between the figures for 1950-1960 and those for the preceding eleven-year period are seen for prematurity, diseases of early infancy, nephritis and diabetes mellitus. In the Fifth Revision of the International List of Causes of Death, "prematurity" (immaturity) was given a high priority in classification. Following the Sixth Revision, various conditions under "Certain Diseases of Early Infancy" were subdivided as to whether or not there was mention of prematurity. Prematurity became a secondary entity, a residual category being provided when another cause for classification was not recorded.

In the case of diabetes mellitus, the difference is due entirely to the method of selecting the cause of death to be tabulated. Diabetes mellitus was formerly given a high preference when jointly stated with other causes; now, if the physician records diabetes as a contributory condition under Section II of the Medical Certificate, indicating that it was a contributing factor but not the disease which initiated the train of events leading to death, the death is not attributed to diabetes, but to one of the causes set out in Section I.

Terms denoting arteriolar nephrosclerosis, once classified under chronic nephritis, have been assigned to classifications under hypertensive diseases. Fewer deaths are therefore now attributed to nephritis, while the number of deaths assigned to "hypertension without mention of heart disease" shows a considerable increase.

General Mortality

Table N presents an historical summary of deaths by sex in the province and the computed crude death rates over a 30-year period while Chart 1 presents a graphic picture of the general trend in the rate.

The death rate among males has been consistently higher than that among females.

ONTARIO, 1951-1960

[illegible]

Chart 5

DEATHS FROM TUBERCULOSIS, CANCER AND PNEUMONIA

ONTARIO, 1948 - 60

RATES PER 100,000 POPULATION

* The 1950 to 1960 figures comprise the malignant neoplasm group (categories 140-205 under the 6th Revision of the International List of causes of death).

Mortality from Tuberculosis

Table S (1) shows the deaths from all forms of tuberculosis in the province from 1951 to 1960. Table S (2) shows the death rates per 100,000 population classified by the age of the decedents from 1951 to 1960. During the year 1960 tuberculosis mortality rate was the lowest ever recorded in Ontario, that of 2.6 per 100,000 of population. Chart 5 illustrates the reduction in mortality from tuberculosis which has taken place since 1948.

Table S (3) in Part 1 of this report gives details of deaths and death rates for counties, cities, towns and villages of 5,000 population and over according to place of occurrence and place of residence for the year 1960.

Mortality from Cancer

Chart 5 illustrates the trend in the mortality rate from cancer. The increase in the total number of deaths since 1951 is shown in Table T (1) and is apparent in most of the age groups particularly among older persons. Table T (2) shows the rate from 1951 to 1960 by sex.

Rates per 100,000 of population by sex. *Include Hodgkin's disease and the leukaemias.

Marriages

From Table W it will be noted that there have been significant fluctuations in the number of marriages in the province from 1933 to 1960.

**TABLE W MARRIAGES AND MARRIAGE RATES PER 1,000 POPULATION,
ONTARIO, 1933-1960**

YEAR	Number	Rate per 1,000 Population	YEAR	Number	Rate per 1,000 Population
1933.....	22,587	6.4	1946.....	46,073	11.2
1934.....	25,874	7.3	1947.....	44,056	10.5

			1959.....	46,598	7.8
			1960.....	45,855	7.5

Divorces

In Ontario, divorced persons form a very small proportion of the population as compared with some of the other countries of the world. The following summary indicates the number and percentages of such persons in the population of the province as enumerated in the past five censuses.

	1921*	1931	1941	1951	1956
Divorced persons—Male.....	1,135	1,071	2,291	4,766	5,529
Female.....	1,369	1,015	2,865	7,668	9,069
Per cent of population—Male.....	0.08	0.06	0.12	0.21	0.20
Female.....	0.09	0.06	0.15	0.34	0.34

*Including legal separations.

An historical summary of the number of marriages dissolved in Ontario since 1919 is presented in Table X. Previous to 1920 very few divorces were granted in the province. There was no appreciable increase in the number till the late 1920's, but, since the transfer in 1930 of jurisdiction from the Dominion Parliament to provincial courts, the rate has increased.

TABLE X DISSOLUTIONS OF MARRIAGE (DIVORCES) AND RATE PER 100,000 POPULATION, 1919-1960, AND RATIO OF DISSOLUTIONS TO MALES AND FEMALES, 1935-1960

Year	Dissolutions of Marriage	Rate per 100,000 Population	Year	Dissolutions of Marriage	Rate per 100,000 Population	DISSOLUTIONS GRANTED TO—		Ratio of Dissolutions to Males per 1,000 Dissolutions to Females

Diseases of teeth and supporting structures.....	1116	82	76	100	96	102	76	101	91	93	119	
Ulcer of stomach.....	774	69	69	64	62	61	68	64	67	74	56	
Ulcer of duodenum.....												
Gastritis and duodenitis.....												
Appendicitis.....												
Intestinal obstruction and hernia.....												
Gastro-enteritis and colitis, except diarrhoea of the newborn.....												
Cirrhosis of liver.....												
Cholelithiasis and cholecystitis.....												
Other diseases of digestive system.....												

X. DISEASES OF THE GENITO-URINARY SYSTEM

Total.....

	A 108	A 109	A 110	A 111	A 112	A 113	A 114
Acute nephritis.....	882	89	77	68	67	69	76
Chronic, other and unspecified nephritis.....	562	54	53	48	35	40	50
Infections of kidney.....	326	35	24	20	32	29	26
Calculi of urinary system.....							
Hyperplasia of prostate.....							
Diseases of breast.....							
Other diseases of genito-urinary system.....							

TABLE 48 CAUSE OF DEATH BY SEX AND MONTH OF DEATH BY PLACE OF RESIDENCE, ONTARIO, 1960

Int. List No.	CAUSE OF DEATH (Intermediate List)	Sex	Total	Months												Int. List No.
				Jan.	Feb.	Mar.	April	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.	
XI. DELIVERIES AND COMPLICATIONS OF PREGNANCY, CHILD BIRTH AND THE PUERPERIUM																
	Total.....		55	2	6	8	3	5	1	8	7	7	4	2	2	
A 115	Sepsis of pregnancy, childbirth and the puerperium.....	F	8	1	2	1	1	2	1	A 115
A 116	Toxaemias of pregnancy and the puerperium.....	F	7	1	1	2	2	1	A 116
A 117	Haemorrhage of pregnancy and childbirth.....	F	8	1	2	1	1	1	1	1	A 117
A 118	Abortion without mention of sepsis or toxæmia.....	F	2	1	1	A 118
A 119	Abortion with sepsis.....	F	11	1	2	3	1	1	1	2	A 119
A 120	Other complications of pregnancy, childbirth and the puerperium	F	19	1	1	1	3	2	1	4	4	2	A 120
XII, XIII. DISEASES OF THE SKIN AND THE MUSCULOSKELETAL SYSTEM																
	Total.....		213	22	16	19	16	18	15	13	17	18	19	16	24	
		M	99	12	5	5	10	11	6	10	8	7	7	9	9
